Rotary

Rotary cutters have been an integral part of the Moline story for over 55 years, and today our cutters are still widely considered the best in the business. The difference is in the details: Desired cutter shape, pattern layout, trim ratio, fabrication method, and production rate are determined on a dough-by-dough, customer-by-customer basis. Moline's standard

material-of-choice is heavy gauge steel. Steel is more durable than plastic and can be retooled if needed – increasing the cutter's useful life many times over. Precision is the name of the game. Moline conducts thorough checks of measurements and machining before applying nickel electroplating or non-stick coating. Moline also offers our renowned air-ejection method.

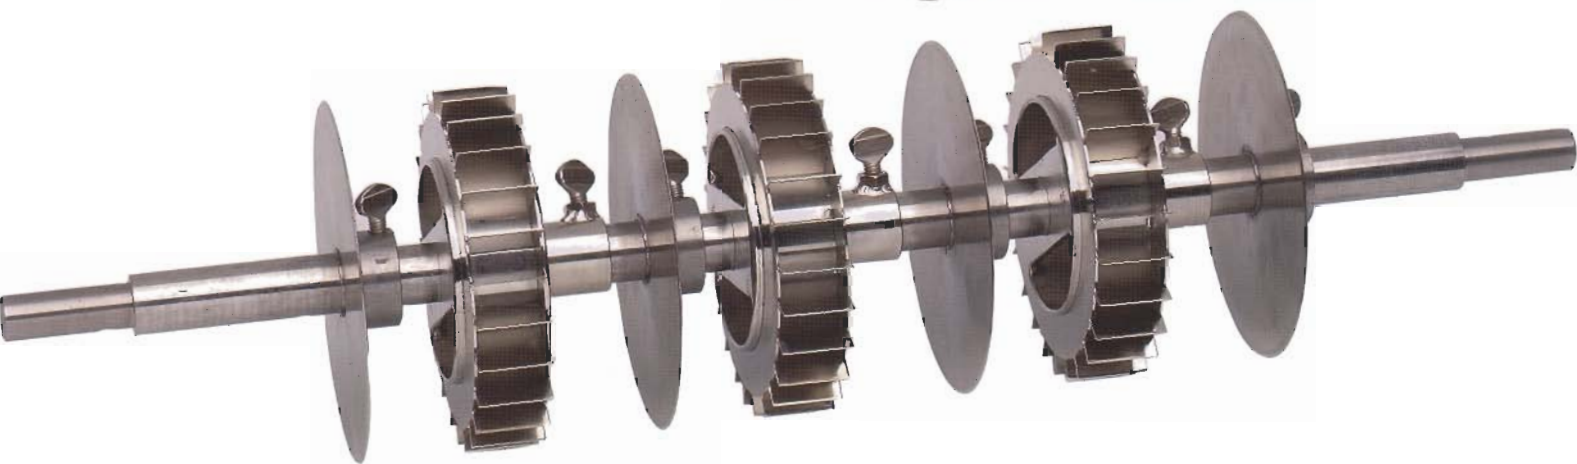

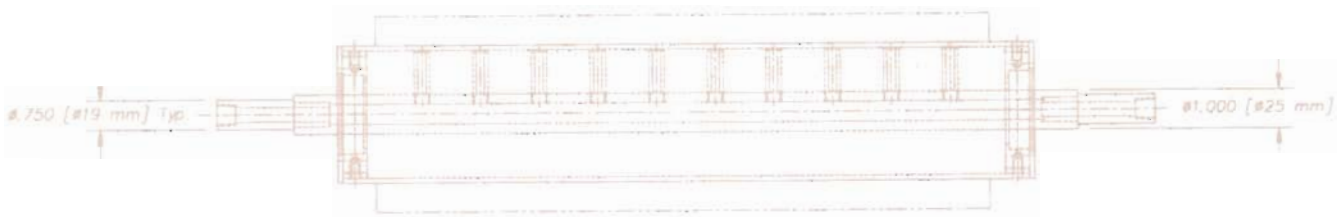

Moline rotary cutters are available for industrial make-up lines manufactured by all leading suppliers and can be purchased with guarded enclosures and positive drives. For effortless, uniform production of pizza crusts, pastries, cookies, donuts, wraps, and more, Moline makes the cut.

- STANDARD, HEAVY STEEL CONSTRUCTION
- MECHANICAL AND AIR EJECTION TECHNIQUES
- ADVANCED NON-STICK COATINGS
- INNOVATIVE SHAPES AND PATTERNS
- LARGE DIAMETER DESIGN FOR LINES TO 1.5 METERS WIDE
- REBUILD SERVICES AVAILABLE
- ROTARY, GUILLOTINE, AND STAMPING CUTTERS
- MADE IN THE USA

PRESENTING THE ULTIMATE CUTTERS FOR LARGE-SCALE PRODUCTION.

Cutters

In 1945, Harry Moline's ground-breaking design of the hexagonal scrapless rotary cutter set a course of innovation and growth that continues today. As the demands of the baking industry have changed, Moline has kept pace with the most advanced engineering and manufacturing techniques. What has remained the same: our unwavering commitment to world-class quality in craftsmanship, materials, and service. Our customers rely on Moline's inventive solutions to their production challenges. For complete baking system needs – proofers, fryers, sheeters, make-up, and finishing equipment – *profit from our experience.*
