The Moline T-Topper topping dispenser is designed to precisely and efficiently dispense fine and large-particle toppings or ingredients in the desired location at the required volume. The unit can deliver an accurate amount of topping continuously, intermittently or in rows/lanes.

The hopper is filled with the desired topping. A specific dispensing shaft, built for the topping application, delivers the topping across the width of the dough sheet or product. Dispensing shafts can be interchanged in a matter of minutes to run a different topping. Shaft speeds are adjusted via a manual controller or operator interface. The amount of topping dispensed can be easily adjusted during operation as line speeds are modified or for product changes.

The hopper slides out of the frame for emptying and for sanitation. The unit is easily disassembled for cleaning during shutdown.

The T-Topper can be stationary-mounted on existing equipment or built as a portable unit on casters. Custom mounting designs are available.
Features

- **Construction:**
  Stainless steel construction with precision machined components.
